AB Pharmaceutical compns. comprising low doses of sensitive complexes between an **estrogen** and a **cyclodextrin** are provided with improved stability. In specific embodiments the compn. comprises a complex between **ethinyl estradiol** and **cyclodextrin** in a granulate prepn. and in yet another embodiment the compn. comprises a limited amt. of **polyvinylpyrrolidone** since this excipient was found to degrade **ethinyl estradiol**. Furthermore, a method for improving the stability of an **estrogen** in a compn. and for manufg. such a stable compn. is provided. Essentially, the granulate prepn. are manufd. under careful control of the relative **humidity**. Tablets were prepd. contg. **drospirenone** and ethinylestradiol-.beta.-**cyclodextrin** complex and many other excipients.

AB The present invention relates to novel human secreted proteins and isolated nucleic acids containing the coding regions of the genes encoding such proteins. Also provided are vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins. The invention further relates to diagnostic and therapeutic methods useful for diagnosing and treating diseases, disorders, and/or conditions related to these novel human secreted proteins.

AB This invention relates to newly identified cancer related polynucleotides and the polypeptides encoded by these polynucleotides herein collectively known as "cancer antigens", or alternatively "cancer related proteins", and the use of such cancer antigens for detecting disorders related to the tissues where these cancer antigens are expressed, particularly the presence of cancer and cancer metastases. This invention relates to cancer antigens as well as vectors, host cells, antibodies directed to cancer antigens and the recombinant methods and synthetic methods for producing the same. Also provided are diagnostic methods for detecting, treating, preventing and/or prognosing disorders related to the tissues where these cancer antigens are expressed, and therapeutic methods for treating such disorders. The invention further relates to screening methods for identifying agonists and antagonists of cancer antigens of the invention. The present invention further relates to inhibiting the production and function of the polypeptides of the present invention.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to novel human secreted proteins and isolated nucleic acids containing the coding regions of the genes encoding such proteins. Also provided are vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins. The invention further relates to diagnostic and therapeutic methods useful for diagnosing and treating diseases, disorders, and/or conditions related to these novel human secreted proteins.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Pharmaceutical compns. comprising low doses of sensitive complexes between an estrogen and a cyclodextrin are provided with improved stability. In specific embodiments the compn. comprises a complex between ethinyl estradiol and cyclodextrin in a granulate prepn. and in yet another embodiment the compn. comprises a limited amt. of polyvinylpyrrolidone since this excipient was found to degrade ethinyl estradiol . Furthermore, a method for improving the stability of an estrogen in a compn. and for manufg. such a stable compn. is provided. Essentially, the granulate prepn. are manufd. under careful control of the relative humidity. Tablets were prepd. contg. drospirenone and ethinylestradiol-.beta.- cyclodextrin complex and many other excipients.
